## DETAILED ACTION

### *Claim Objections*

1. The numbering of claims is not in accordance with 37 CFR 1.126 which requires the original numbering of the claims to be preserved throughout the prosecution. When claims are canceled, the remaining claims must not be renumbered. When new claims are presented, they must be numbered consecutively beginning with the number next following the highest numbered claims previously presented (whether entered or not).

Misnumbered claims 26-34 have been renumbered to 14-22.

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 15-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are replete with indefinite language. For example:

a) claim 15 fails to define formula (IV)

b) claim 17 uses the language "high proportion of terminal double bonds".

What is high proportion?

c) claim 18 refers to formula (V) which is not defined.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

*Claim Rejections - 35 USC § 103*

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 14-22 are rejected under 35 U.S.C. 102(e) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Dever et al(US 6,262,310).

Dever et al teach halogen-free hydroxypolyalkene amine compositions and their use as additives to fuel and lube oil. See for example the summary of invention columns 2-4. Also note in lines 1-2 of column 2 the well-established use of these compounds as fuel and lube oil additives. Applicant is claiming polyalkene amines that are substantially free of halides. Note that one specific claimed substituent is "hydroxyalkyl" (see claim 14). Thus, Dever et al anticipate the instant claimed invention when  $R_{5-6}$  is hydroxyalkyl.

The indefinite claims are either anticipated or obvious. Because applicant refers to structures not specifically recited it is unclear as to whether Dever et al anticipate or render obvious the instant claims. But it is clear that composition of claim 14 does not drastically change due to the limitations of claims 15-20. The composition remains a halogen free halide polyalkene composition.

The fuel and oil additive compositions (claims 21-22) may be obvious because of the specifically recited concentration or weight limitations. The limitations, if not specifically taught by Dever et al, are obvious since one skilled in the art would be motivated to optimized the addition of the halogen-free hydroxypolyalkene amine compositions as an additive to fuel and lube oil compositions.
